# ELIO® Fiber Optic

## Presentation

Today's technology for Airborne & Military equipment is more and more complex, requiring the management of an increasing flow of information at greater speeds combined with the necessity to save weight.

In response to this need, SOURIAU offers a wide range of copper and fiber optic solutions for high speed networks in harsh environments.

Fiber optic is the best solution when high data-rate, EMI immunity and weight savings are required.

The ELIO® terminus can handle data speeds from several Mbit/s up to several Gbit/s thanks to its excellent optical performance in the most severe environments. Its unique user-friendly design and its versatility accounts for the selection of ELIO® by major customers in various markets for their fiber optic applications.

## Description

**Type 1:** Adaptor for use with a standard 38999 Series III/EN3645 backshell. Caution is necessary in the choice of the standard backshell: it must allow enough room to accommodate the push back of the cable during the connector mating.

**Type 2:** Backshell for straight or right angled heat shrink boot (not supplied), suitable for tactical cables or protection tubes for example. Adapted to sealed and low mechanical retention applications.

**Type 3:** Backshell with cable gland suitable for tactical cables only. Adapted to sealed and high mechanical retention applications. See table p.26 for dimension code depending on the shell size and the cable diameter.

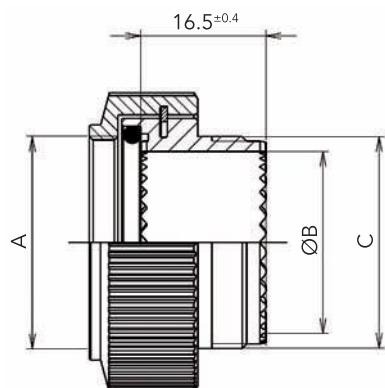

**Type 4:** Backshell derived from Type 3 without the cable gland. Suitable to adapt specific male threaded adaptors (not supplied) for ANAMET or PMA tubes for example. See table p.27 for the size of the female thread depending on the shell size.

## Harnessing

- Military or aerospace jumpers, highly exposed to extreme acceleration, deceleration with shock, vibration and environmental constraints like dust and contaminant, are a perfect example where know-how and experience are key to providing a cost-efficient and sustainable solution.

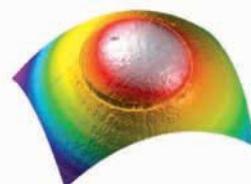

- The dedicated R&D optical team supports your specific needs from pre-project to full industrial release with adapted solutions: Technical and economical analysis with the customer, design and development of optical solution, deployment support (work instruction, field training, installation procedure) and robust after sales support.

- 100% of harnesses and patchcords are tested with interferometer to check the positioning of the fiber inside the ferrule.
- 100% visually inspected under microscope.

- 30 years of experience in designing fiber optics connectors harnesses
- Test lab able to realize mechanical, environmental, climatic tests
- Reactivity: in house production line close to the design office

## Interferometry

Technical measurement that calculates the topography of a surface.

The system gives in 3 dimensions the observed surface with curves similar to levels of a geographic map. As a result it is possible to get the geometric parameters of the optical contact with an extreme accuracy.
